Material & Finish

To allow us to supply you with products of the highest quality we exclusively use high-grade raw materials, primarily brass. Brass is closely related to bronze and shares its same great properties. The material is resistant to the most extreme weather conditions and is corrosion-free, making it ideal for applications both indoors and outdoors.

The standard finishes you'll find in our catalogue include bronze, brushed nickel, chrome and polished brass (with a golden sheen) but we are equally happy to execute your light fittings in other finishes like polished nickel or brushed brass. Don't hesitate to contact us to discuss the options.

BELLEFEU® FIREPLACE

344

Create your own

—

INDOOR

—

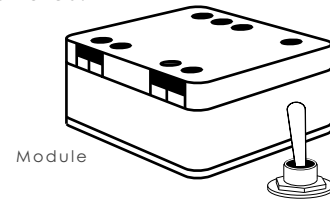

339

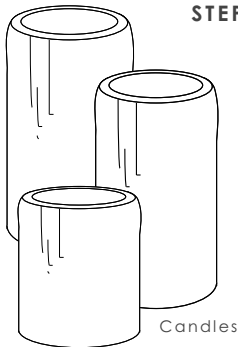

BELLEFEU®

CREATE YOUR OWN

STEP 1: Start with the starter kit that includes the module that creates the candle effect and a push dimmer. Note that 1 starter kit can serve up to 18 candles.

340

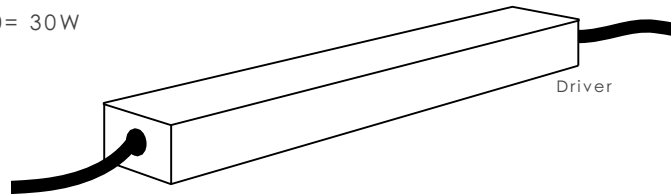

STEP 2: Choose the number of candles and the desired heights, diameters, and finishes. Available finishes include alabaster, glass, white wax and linnen wax.

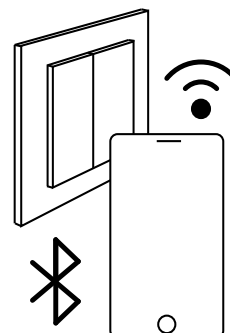

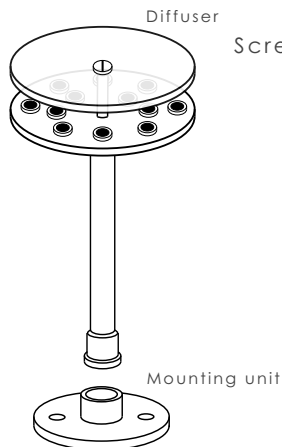

STEP3: Each candle is 2.4W. Multiply 2.4 x number of candles. You need this result to choose the driver. A driver converts 230V to 24V. Note: the wattage of the driver should always be higher than the wattage of the number of candles. You can choose the desired driver on page 485.

Example: 2.4W x 10 candles= 24W -> TOEDR2430= 30W

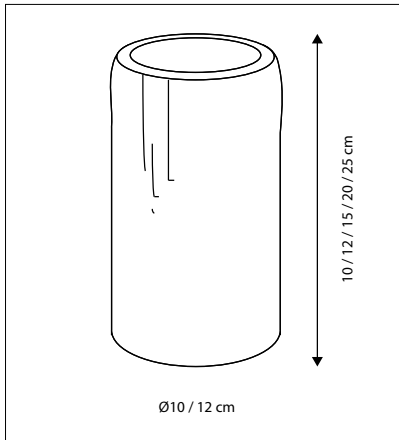

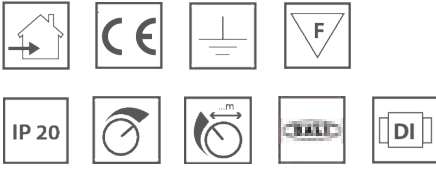

# CANDLES	WATTAGE	DRIVER
1-4	12	TOEDR2412
4-8	20	TOEDR2420
8-12	30	TOEDR2430
12-18	60	TOEDR2460

STEP4: Optional: LED diffusers & screw mounting units. LED diffusers (1 item/candle) mask the LED technology and are useful for candles placed on a table or close to the ground. Screw mounting units (1 unit/candle) can be added to fix the candles to a surface.

Control systems: prefer dimming via a switch on the wall or via home automation? Contact us for the various options.

BELLEFEU® FIREPLACE

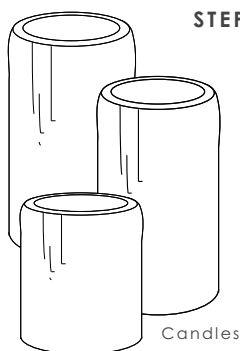

CREATE YOUR OWN

STEP 1: Start with the starter kit that includes the module that creates the candle effect and a push dimmer. Note that 1 starter kit can serve up to 18 candles.

STEP 2: Choose the number of candles and the desired heights, diameters, and finishes. Available finishes include alabaster, glass, white wax and linnen wax.

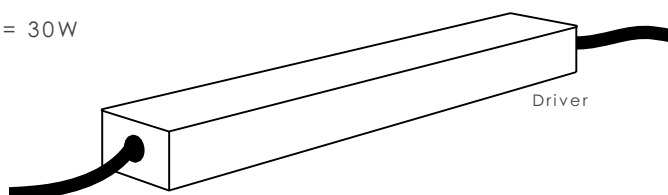

344

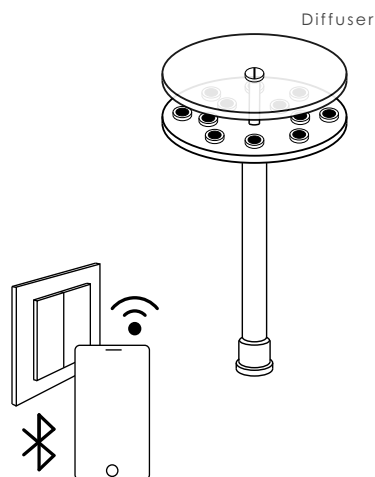

STEP 3: Each candle is 2.4W. Multiply 2.4 x number of candles. You need this result to choose the driver. A driver converts 230V to 24V. Note: the wattage of the driver should always be higher than the wattage of the number of candles. You can choose the desired driver on page 487.

Example: 2.4W x 10 candles= 24W -> TOEDR2430= 30W

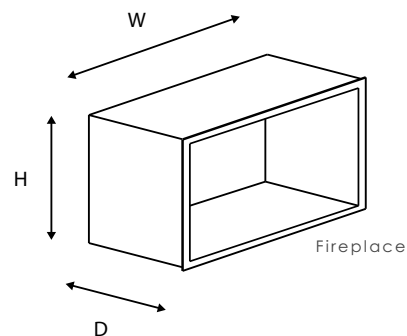

# CANDLE	WATTAGE	DRIVER
1-4	12	TOEDR2412
4-8	20	TOEDR2420
8-12	30	TOEDR2430
12-18	60	TOEDR2460

STEP 4: Optional: LED diffusers. LED diffusers (1 item/candle) mask the LED technology and are useful for candles placed on a table or close to the ground.

STEP 5: Measure the dimensions of your fireplace. W x D x H

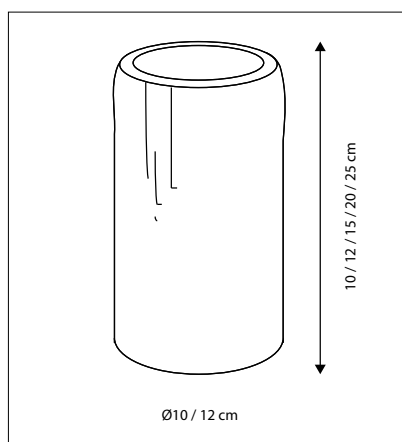

Control systems: prefer dimming via a switch on the wall or via home automation? Contact us for the various options.

CONNECTION SYSTEM TUBE

ACCESSORIES

484

DRIVER / TRANSFORMER

ACCESSORIES

Select your driver with following steps

STEP 1

SELECT TYPE OF DRIVER (12V OR 24V)

Collection	Type of driver
Centonze, Marron, Comète, Poire, Fleure, Fleure Twin, Fiston, Monet, Grille, Subtile, Charmond (retrofit), Macro	12V
Matisse, Pipilier, Beautique, Galed, Charmond (integrated), Eclips	24V

486

STEP 2

CALCULATE TOTAL POWER CONSUMPTION OF THIS CIRCUIT

How many products (N) do you combine on 1 driver?

Total power consumption = N x power consumption of 1 product

STEP 3

CALCULATE REQUIRED DRIVER CAPACITY

LED lamp: use maximum 50% of total nominal power of the driver

Halogen lamp: use 100% of total nominal power of the transformer

STEP 4

LOCATION OF THE DRIVER / TRAF0

Indoor, outdoor or in the ground

EXAMPLE: Installation of 4 Centonze LED-spot with a bulb of 12W each in a living room

- Step 1** Centonze requires 12V driver
- Step 2** Total power consumption = 4(N) x 12W (power consumption of 1 product) = 48W
- Step 3** LED lamp, only 50% of driver power can be used. Total required driver capacity is 2x48W=96W
- Step 4** Indoor application (living room)
- Result** Drivers TOETRAP10 (rectangular) or TOETRAR10 (round) can be used
